

What the machine is, and what it does.

Four cabinets, one set of electronics. A customer taps a card, the door unlocks, cameras identify what was taken and the card is charged for it — no keypad, no selection, no coins. This sheet is the equipment only; prices are in the package for your route.

Our own machine, trading since June 2026.

THE RANGE

Four cabinets

CABINET	W × D × H	VOLUME	HOLDS	TEMPERATURE	WEIGHT	POWER
Mini 360	580 × 675 × 1940 mm	393 L	~252 bottles	0 to 10 °C	86 kg	2.0 kWh/24h ~60 kWh/month
Pro 542	750 × 650 × 2020 mm	558 L	~378 bottles	0 to 10 °C	122.5 kg	2.65 kWh/24h ~80 kWh/month
Freezer 550	700 × 840 × 2010 mm	567 L	~384 bottles	−22 to −18 °C	150 kg	8.33 kWh/24h ~250 kWh/month
Ultra 1200	1370 × 700 × 2020 mm	1131 L	~756 bottles	0 to 10 °C	172 kg	6.2 kWh/24h ~186 kWh/month

Bottle counts are the manufacturer's shelf-display figures for 500 ml bottles and 330 ml cans across six shelves. What a cabinet holds of anything else — a ready-meal tray, a protein bar, a carton — depends on its footprint, so ask us and we will work it out per shelf rather than guess.

HOW IT WORKS

Vision, not weight

- **Recognition by camera**, quoted at 99% accuracy. There are no weight sensors under the shelves, so identification is by sight alone.
- **Cards and Apple Pay**, contactless. No cash is held in the machine at any point.
- **About a minute** from the door closing to the charge being taken.
- **A new line is recognised within six hours** of being added, so a range change does not wait on an engineer.
- **Temperature set remotely** from the app, per cabinet.
- **Anti-fog glass door** and an aluminium alloy frame — the display stays readable from cold and the frame does not deform in service.
- **Monitored**, so you hear from us that a machine is offline rather than from whoever's building it stands in.

THE SITE

What it needs where it stands

- **Under a square metre** of floor, against a wall, on a hard level surface.
- **One standard 13A socket**. Nothing is plumbed and nothing is bolted down. Electricity depends on the cabinet and your tariff: a single-door chilled machine is around £20 a month, and the table above gives the monthly draw for each — the Freezer 550 and the Ultra 1200 use materially more.

- **A mobile signal or wifi.** The machine carries its own connectivity; wifi is used where the signal is poor.
- **Trolley access** on delivery — a normal doorway and a lift are enough.

WORTH KNOWING

What it does not do

It cannot tell two look-alike products apart reliably. Recognition is by sight, so two lines in near-identical packaging are the hard case. A different cap or label colour fixes it, and that is a cheap decision before a print run and an expensive one after.

It does not publish a running temperature log. Temperature is set and adjusted from the app, but the cabinet does not stream a continuous reading into the back office. If your product needs temperature records for food safety, plan a separate data logger.

It holds up to £5 on the card when the door unlocks, then captures only what was taken. The hold is normal and clears by itself, but customers do see it and sometimes think they have been overcharged — worth knowing before your first week.

It takes no cash, and it cannot check anybody's age.
